

- This burndown chart denotes when each task was finished
 - In order: (SEAL-13, SEAL-14, SEAL-15), SEAL-17, SEAL-18, SEAL-37
- Since all task are done mostly separately, most tasks were finished at around the same time leading to a somewhat misleading burndown chart
 - SEAL-13, SEAL-14, SEAL-15 were merged together due to being similar
 - SEAL-18 was not finished
 - To reiterate what was stated in schedule.pdf, all tasks assigned tasks have little to no dependencies (due to planning)
 - This allows all members to work on their portion of the tasks on their own
 - We look to finish all our assigned tasks before the deadline and merging and resolving issues with the remaining time, although due to interruptions, we were not able to finish our tasks to allocate time for merging
- Our planned velocity in sprint 3 was 63 points/hours (which was mostly met) this is a result of unfamiliarity with technology, general confusion due to lack of experience and venturing into new territory with the Zoom API for integration
- This sprint we have a planned velocity of 63 points/hours (which was not met), I believe this is because of the ambitious goal setting at the beginning of the sprint and lack of foresight into interruptions that will affect velocity
- During this sprint, we had many “out of control” events such as vaccine appointments which has significantly hindered our progress
