

- This burndown chart denotes when each task was finished
  - In order: SEAL-39, SEAL-38, SEAL-16, SEAL-12, SEAL-19, SEAL-8, and SEAL-5
- Since all task are done mostly separately, all tasks are finished at around the same time leading to a somewhat misleading burndown chart
  - To reiterate what was stated in schedule.pdf, all tasks assigned tasks have little to no dependencies (due to planning)
  - This allows all members to work on their portion of the tasks on their own
  - We look to finish all our assigned tasks before the deadline and merging and resolving issues with the remaining time
    - The lack of “extra-time” in case something goes wrong has been brought up in SR2.md
- Our planned velocity in sprint 1 was 40 points/hours (which was mostly met) this is a result of unfamiliarity with subject, general confusion due to lack of experience and some other factors
- This sprint we have a planned velocity of 40 points/hours (which was also mostly met), I believe this is because of our better planning and hindsight
- During this sprint, we had many “out of control” events such as midterms and vaccine appointments as compared to sprint 1, the experience gained and the increase in competence resulted in our increase in velocity by 33%
